Output in the construction industry

3rd quarter 2008

The total volume of construction output in the third quarter of 2008 was unchanged compared with the second quarter of 2008. New private housing work was 7 per cent lower and new public housing was 7 per cent lower over the same period. All new work rose by 2 per cent

whilst repair and maintenance fell by 2 per cent. The total volume of construction output in the 12 months to the third quarter of 2008 rose by 3 per cent compared with the previous 12 month period.

Next publication date
6 March 2009

The total volume of new work in the 12 months to the third quarter of 2008 was 1 per cent higher compared with the previous 12 months and was 2 per cent higher in the third quarter when compared with the previous quarter. The total volume of repair and maintenance work rose by 4 per cent in the 12 months to the third quarter of 2008 compared with the previous 12 months, but was 2 per cent lower in the third quarter of 2008 compared with the previous quarter.

New housing

New private housing work in the year to the third quarter of 2008 was 14 per cent lower compared with the previous 12 months and the third quarter of 2008 was 7 per cent lower compared with the previous quarter. New work in the public housing sector in the year to the third quarter of 2008 was 3 per cent lower (on a small base figure) compared with the previous 12 months and the latest quarter was 7 per cent lower than the previous quarter.

New infrastructure

New infrastructure output in the 12 months to the third quarter of 2008 was 19 per cent higher compared with the previous 12 months and the third quarter of 2008 rose by 6 per cent compared with the previous quarter.

New private non-housing

New construction work in the private industrial sector in the 12 months to the third quarter of 2008 was 15 per cent lower compared with the previous 12 months, and was 3 per cent lower in the latest quarter compared with the previous quarter. New private commercial output in the 12 months to the third quarter of 2008 was 7 per cent higher compared with the previous 12 months and was 3 per cent higher in the third quarter of 2008 compared with the previous quarter.

New public non-housing

New work in the public non-housing sector (excluding infrastructure) in the 12 months to the third quarter of 2008 rose by 13 per cent compared with the previous 12 months and rose by 11 per cent in the third quarter compared with the previous quarter.

Housing repair and maintenance

Housing repair and maintenance work (including improvement work) in the public sector rose by 2 per cent in the 12 months to the third quarter of 2008 compared with the previous 12 months but fell by 1 per cent in the most recent quarter compared with previous quarter. Housing repair and maintenance work in the private sector in the 12 months to the third quarter of 2008 was 5 per cent higher compared with the previous 12 months but fell by 6 per cent in the third quarter of 2008 compared with the previous quarter.

Non-housing repair and maintenance

Repair and maintenance work in the public non-housing sector in the 12 months to the third quarter of 2008 was 9 per cent higher compared with the previous 12 months, and was 8 per cent higher in the most recent quarter compared with the previous quarter. Repair and maintenance work in the private non-housing sector in the 12 months to the third quarter of 2008 was 2 per cent higher compared with the previous 12 months but was 4 per cent lower in the most recent quarter compared with the previous quarter.

Revisions

Construction output series may be revised following publication of the first quarterly estimate. Revisions to the output series for 2007 have been caused by revisions to some of the price and cost indices used to deflate the current price data to constant (2000) prices. There have been some minor revisions to current price data in Q2 2008.

Revisions to construction output (constant (2000) prices seasonally adjusted) growth rates

BACKGROUND NOTES

Relevance to users

1. The First Release brings together information on the output of the construction industry in Great Britain. It draws on data compiled from quarterly sample surveys of construction contractors and of public sector direct construction labour, as well as an estimate of the output of the unrecorded sector (the self-employed and firms operating below the VAT threshold). The construction industry, which contributes to the overall estimate of Gross Domestic Product (GDP) by approximately 6%, covers Section F of the Standard Industrial Classification 2003.
2. Similar data for Northern Ireland is provided by the Northern Ireland Statistics and Research Agency at:
<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=13904&Pos=&ColRank=1&Rank=272>
3. Responsibility for construction output, employment and new orders statistics transferred from the Department for Business, Enterprise and Regulatory Reform to the Office for National Statistics on 1st March 2008. The statistics published in this release continue to be based on the methodology developed by BERR. ONS is carrying out a review of the data collected and methodology in order to bring these in line with standard ONS procedures. A revised data collection and publication procedure is expected in 2010. Public consultation on user aspects of these proposals will take place in January 2009. However, ONS has already completed a review into the provision of consistent and coherent employment information. As a result of this review the table 'Construction industry employees and total employment' is no longer included in this release. Information relating to employment in the construction industry is instead available in the Labour Market Statistics First Release at:
<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=1944>

Accuracy

4. Revisions to previous periods: Figures for the recent quarters are provisional and subject to revision, as later information becomes available.
5. Figures marked r indicate that the data have been revised since the last edition.

Deflation and seasonal adjustment

6. The headline data are given in constant 2000 prices, seasonal adjustment. Deflators adjust the value series to take out the effect of price changes to give the volume series. Deflation of output is carried out sectorally, and a range of relevant tender price, materials price and labour price indices are used.
7. Seasonal adjustment aids interpretation by removing annually recurring fluctuations, for example, due to climate, hours of daylight, holidays or other regular seasonal patterns. Unadjusted data are also available.

Further information

8. Spreadsheets containing the data published in this First Release, as well as further breakdowns and previous ONS releases can be found at:
<http://www.statistics.gov.uk/STATBASE/Product.asp?vlnk=725>
9. Releases on construction output and employment prior to the transfer to ONS can be found on the BERR website at:
<http://stats.berr.gov.uk/construction/output/>
10. Related releases on orders for new construction in Great Britain are published at:
<http://www.statistics.gov.uk/STATBASE/Product.asp?vlnk=720>
11. The Construction Statistics Annual publication brings together a wide range of statistics that are currently available on the construction industry from a number of different sources. This is published at:
<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=284&Pos=&ColRank=1&Rank=272>

Publication policy

12. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this release.
13. National Statistics are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.
